```

Streptavidin mutants with higher binding affinity for peptide ligands - have mutation in amino acid region 44-53, used to isolate, purify or determine fusion proteins including these ligands.

Claim 10; Page 11; 21pp; German.

AAW59211 and AAW59212 are ligands used in a method to assay binding affinity of streptavidin mutants. These mutants have a mutation within the amino acid (aa) region 44-53 of the wild-type protein show a higher binding affinity than the wild-type for peptide ligands that include the sequence of formula Trp-X-His-Pro-Gln-Phe-Y-Z where X = any aa; Y and Z are both Gly, or Y = Glu and Z = Arg or Lys. Recombinant streptavidin mutants can be used to isolate, purify and determine proteins or to determine/recover substances that contain streptavidin-binding groups. Such compounds may also be used to immobilise fusions on microtitre plates, microbeads or sensor chips

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method of detecting nascent proteins involving aminoacylating a tRNA molecule with a 4,4-difluoro-4-bora-3A,4A -diaza-s-indacene (BODIPY) marker leading to the production of a misaminoacylated tRNA. This enables the detection, isolation and analysis of nascent proteins using UV without the usual accompanying radioactivity problems. It may be used to detect mutations, for example in cancer, but the muscular dystrophy, adenomatous polyposis coli and colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 47; 204pp; English.

This enables the detection, isolation and analysis of nascent proteins using UV without the usual accompanying radioactivity problems. It may be used to detect mutations, for example in cancer, Duchenne muscular dystrophy, adenomatous polyposis coli and colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Method for detecting nascent proteins by fluorescence comprises misaminoacylating a tRNA molecule with a marker compound, useful detecting mutations in proteins, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Strep-Tag II sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-APR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB68616;

The present invention relates to a method of detecting mutations in a nucleic acid by amplifying the nucleic acid to produce a double-stranded amplicon, in vitro transcription and translation of this amplicon, and detection of the translated protein. The primers used for amplification are designed to produce an amplicon that is translatable and allows differentiation between translation products of wild-type and mutated nucleic acids. The method is used to detect mutations in tumour suppressor genes, for (early) diagnosis, monitoring and characterisation of tumours (especially of bladder and intestines) and in the germ line (using nucleic acids from embryos or blood cells). A new multi-tag vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for affixing a peptide acceptor to an RNA molecule through the formation of a covalent bond, noncovalent bond, or by chemical ligation. The method is useful for producing RNA-protein fusions which can be used for the isolation of proteins or nucleic aids with desired properties from large pools of partially or completely random amino acid or nucleic acid sequences. The present sequence is a Strep-Tag II used in the present invention
                                                                                                                                                                                                       Detecting mutations in nucleic acid, useful for diagnosis and characterization of tumors, by amplification, in vitro transc translation, then protein detection.
                                                                                                                                                                                                                                                                                                                     Kahmann S,

The present invention describes a composition (1), comprising a polypeptide comprising an antibody-based antigen-hinding domain of human composition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the IC50 for the suppression of immune response is 1 microM or less. (1) has

Composition for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen expressed on a cell surface.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    can be used as a suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system, compressing II-2 secretion by a cell, the interaction of a cell of the immune system with another cell, the interaction of a cell of the cell of the cell, the immune suppressing a patient and for cell immune system with another cell, immunosuppressing a patient and for cell immunological mechanisms are needed to cause or lead to the killing. (I) (optionally linked to cytotoxic or immunogenic agent) is useful for ceparating a pharmaceutical preparation for the treatment of rheumatoid certhritis, juvenile arthritis, multiple sclerosis, Grave's disease, insulin-dependent diabetes, narcolepsy, psoriasis, systemic lupus cerythematosus, ankylosing spondylitis, transplant rejection, graft versus completed disease, Hashimoto's disease, myasthenia gravis, pemphigus vulgaris, cerythematosis, irritable bowel disease and Sjogren's syndrome in humans.

                  The invention relates to a viral vector system for preparing recombinant adeno-associated virus (AAV) particles comprising, at least two plasmid vectors (ABL58983 and ABL58984) that include the two inverted terminal repeats (ITR) of AAV and additional sequences and plasmid vectors without ITRs but containing the rep and cap genes of AAV required for replication and packaging. The system is useful for producting recombinant AAV for production of a wide range of therapeutic glycoproteins in eukaryotic cells. The system provides efficient, large scale production of heterologous proteins in mammalian cells, without requiring an adenovirus heterologous proteins in mammalian cells, without requiring an adenovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 8 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vector system for preparing recombinant adeno-associated viral particles, used for high-level expression of heterologous therapeutic proteins in eukaryotic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABB77486 standard; peptide; 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22-JUL-2002

                                                                                                                                                                                                                                                                               This invention describes a novel method for the production of non-protein L-amino acids by the reaction of O-acetyl-L-serine with a nucleophile in the presence of a catalyst comprising O-acetyl-L-serine sulphydrylase at pH 5-7.4. The method of the invention is useful for the manufacture of pharmaceuticals and agrochemicals. In contrast to the process described in DE 10046934, a high nucleophile concentration can be used which includes toxic compounds. This sequence represents an affinity peptide containing a StrepTagII motif which is used in the construction of fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 8 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       produced proteins are highly pure. The present sequence is that of peptide tag, useful to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Production of non-protein L-amino acids useful for the manufacture pharmaceuticals and agrochemicals, comprises an enzyme catalyzed re of O-acetyl-L-serine with a nucleophile.

                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for isolating mRNA from a population of cells. The method involves selectively isolating ribosomes or proteins that bind mRNA in a cell type specific manner and then isolating the mRNA bound to the ribosomes or proteins that bind mRNA. The method is useful for facilitating the analysis and quantification of gene expression in a selected cell type present within a heterogeneous cell mixture. The method may also be used in disgnostics or therapies for human diseases. The present sequence is Strep-tag II epitope peptide. This sequence is used to illustrate the method of the invention

(I), which contain streptavidin binding modules, are useful as affinity handles for purification of recombinant fusion proteins (FP), also for detecting FP, c.g. on protein chips or microtitre plates. The modules in (I) bind strongly to streptavidin, with a co-perative effect that provides stronger binding than a single tag, but are displaced by a competitor. (I) does not interfere with the function of attached proteins (II) (so it may not be essential to remove it); facilitates detection and has easily controllable binding properties. (I) is particularly used for purifying FP from dilute solution in batch formats (which use simpler apparatus than column methods and result in lower loss of FP). The present sequence is that of a streptavidin tag peptide disclosed with the invention
                                                                                                                                                                                                                                            DE10113776-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                StepTag epitope useful as an affinity marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated peptide (I) comprising at least two individual modules separated by 0-50 amino acids, with each containing at least one motif His-Prox where X = Gln, Asm or Met. (I), which contain streptavidin binding modules, are useful as affinity handles for purification of recombinant fusion protein as (FP), also for detecting FP, e.g. on protein chips or microtitre plates. The modules in (I) bind strongly to streptavidin, with a co-operative effect that provides stronger binding than a single tag, but are displaced by a competitor. (I) does not interfere with the function of attached proteins (II) (so it may not be essential to remove it); facilitates detection and has easily controllable binding properties. (I) is particularly used for purifying FP from dilute solution in batch formats (which use simpler apparatus than column methods and result in lower loss of FP). The present sequence is that of a streptavidin binding peptide disclosed with the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-JUN-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-MAY-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US2003092031-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-NOV-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADA09808 standard; peptide; 8 AA.

      This invention describes a novel method of expressing genes in a cell-
free transcription and translation system which comprises using a
reaction solution containing all necessary components of the
transcription/translation system, amino acids, nucleotides and
metabolites that supply energy and that are needed for synthesis. The
proteins formed are immobilised on a matrix. The method allows simple
recovery of proteins without a separate isolation step and the amount o
proteins produced can be determined before a reaction is complete.
Continuous removal of proteins process, making possible synthesis of proteins that interact
expression process, making possible synthesis of proteins that interact
adversely with the process, so normally produced only in very low yield
the need of a matrix concess, so normally proteins that interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   dipyrrometheneboron difluoride (4,4-difluoro-4-bora-3a,4a-diaza-8-indacene) dyes. The detection method of the invention is a gel-free method that comprises introducing a modified nucleic acid template into a translation system under conditions such that a nascent protein is generated, the protein comprising at least an N-terminal marker. The method is useful in detecting, analysing and isolating nascent proteins produced in a cell-free or cellular translation system without the use of radioactive amino acids or other radioactive labels. Compositions comprising nascent proteins translated in the presence of markers may be used as vaccines or as drugs for humans and other animals. The method and a kit containing reagents for the detection of nascent proteins may be used as a rapid means to screen humans or other animals for the presence of certain diseases or disorders. The present sequence represents an epitope that can be used as an affinity marker for protein separation.
                                                                                                                                                                                                                                                 Claim 13; Col
                                                                                                                                                                                                                                                                                                    Expressing genes in cell-free system, useful for preparation of proteins, comprises that the protein formed is removed from solution by binding to

This invention relates to novel truncated human aggrecanase proteins and nucleotide sequences. Aggrecan is a major extracellular component of articular cartilage. It is a proteoglycan responsible for providing cartilage with its mechanical properties of compressibility and elasticity. The loss of aggrecan has been implicated in the degredation of articular cartilage in arthritic disease implicated in the degredation of articular cartilage in arthritic disease such as osteoarthritis. Aggrecanase is responsible for the cleavage of aggrecan, thereby having role in cartilage degradation associated with osteoarthritis and inflammatory joint disease. The proteins of the current invention are truncated aggrecanase-1 (ADAMTS-4) and aggrecanase-2 (ADAMTS-5) enzymes which have at least one thrombospondin (TSP) domain deleted. These are biologically active and have greater stability and higher expression that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               to proteins of any size. This sequence represents a highly conserved peptide from E. coli streptavidin which is used to illustrate the med of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New biologically-active aggrecanase protein having a deletion
a portion of a TSP domain, useful for treating osteoarthritis,
Parkinson's disease, coronary thrombosis, Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 aggrecanase; aggrecan; articular cartilage; proteoglycan; cartilage compressibility; cartilage elasticity; arthritic disease; osteoarthritis; cartilage degradation; inflammatory joint disease; osteoarthritis; cartilage degradation; inflammatory joint disease; aggrecanase-1; ADAMTS-4; aggrecanase-2; ADAMTS-5; thrombospondin domain; TSP domain; osteopathic; antiarthritic; cytostatic; antiinflammatory; antirheumatic; ophthalmological; thrombolytic; vasotropic; antimicrobial; respiratory-gen; nootropic; neuroprotective; antiparkinsonian; immunosuppressive; aggrecanase inhibition; cancer; rheumatoid arthritis; septic arthritis; corneal ulceration; coronary thrombosis; Crohn's disease; emphysema; Alzheimer's disease; parkinson's disease; multiple activation; carcer; release; carting the coronary disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-DEC-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               their full-length counterparts. The proteins of the invention may be of use in the development of compounds with osteopathic, antiarthritic, cytostatic, antiinflammatory, antirheumatic, ophthalmological, thrombolytic, vasotropic, antimicrobial, respiratory-gen, nootropic, neuroprotective, antiparkinsonian or immunosuppressive activities throug aggrecanase inhibition. The proteins of the invention may therefore be useful for the manufacture of compositions for the treatment of aggrecanase-associated conditions, such as osteoarthritis, cancer, inflammatory joint disease, rheumatoid arthritis, septic arthritis, corneal ulceration, coronary thrombosis, Crohn's disease, emphysema, Alzheimer's disease, Parkinson's disease, multiple sclerosis and aortic aneurysm. The present sequence is that of a streptavidin tag peptide linker which was used during the exemplification of the invention.
                                                                           The invention comprises a drug composition consisting of hollow nanoparticles which enclose a drug substance and which present a specific antibody on their surface. The drug composition is usef cell or tissue specific treatment of cancer and virus infections present amino acid sequence was used in the exemplification of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 9, Application US/09809517A
Patent No. 6753136
GENERAL INFORMATION:
APPLICANT: Lohning, Corinna
TITLE OF INVENTION: No. 6753136el methods for displaying (poly)peptides/proteins on FILE REFERENCE: MORPHO/11
CURRENT FILING DATE: 2001-03-15
CURRENT TILING DATE: 2001-03-15
PRIOR APPLICATION NUMBER: EP 99114072.4
PRIOR APPLICATION NUMBER: EP 99114072.4
PRIOR APPLICATION NUMBER: EP 90103551.8
PRIOR FILING DATE: 2000-02-18
NUMBER OF SEQ ID NOS: 41
SOFTWARE: PAtentin version 3.0

APPLICANT: Lohning, Corinna
APPLICANT: Lohning, Corinna
TITLE OF INVENTION: No. 6753136el methods for displaying (poly)peptides/proteins on
TITLE OF INVENTION: particles via disulfide bonds
TITLE REFERENCE: MORPHO/11
CURRENT APPLICATION NUMBER: US/09/809,517A
CURRENT FILMS DATE: 2001-03-15
CURRENT FILMS DATE: 2001-03-15
Sequence 34, Application US/I
Patent No. 6753136
GENERAL INFORMATION:
APPLICANT: Lohning, Corinna
TITLE OF INVENTION: No. 675:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GENERAL INFORMATION: APPLICANT: Lohning,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
